Conflicting ethics? Medicine, science and elite sport in the 21th century

When we are faced with any ethical problem we find ourselves, very often, confronted with a clear intuition, but no clear route through to a justified conclusion on how to proceed. Often, sports scientists - both natural and social - and sports physicians think that there are only subjective answers to these problems.

In this talk I consider how we ought to think in a structured and systematic way about three ethical issues (i) concussion; (ii) doping; and (iii) genetic enhancement in the nexus of medicine, science and elite sport.
